

Implementing a Public Safety Drone Program: Instructor-led Training Support Package

Implementing a Public Safety Drone Program: Instructor-led Training Support Package (Drone ILTSP) was created to help guide public safety agencies through the process of establishing and implementing successful drone programs.

Developed as a comprehensive training resource for in-person instruction, Drone ILT provides direct access to instructional materials addressing drone program implementation in a public safety setting. Specifically, the Drone ILTSP includes downloadable versions of the following:

- Instructor Guide complete with a researched and cited instructional script
- Participant Guide that includes notes, exercises, and activity pages
- Pre- and post-course assessment and corresponding answer key
- Course media (case study videos) in standard, closed captioned (CC), and audio-description (AD) versions

Appropriate for delivery as an 8-hour, in-person training or segmented modular training, the Drone ILTSP course includes an examination of current credentialing requirements, the evolving nature of drone technology and associated regulations, as well as guidance for determining the scope of resources needed for successful implementation.

Target Audience:

Public safety agencies interested in implementing a drone program, police agencies, sheriff's departments, fire and rescue services, and other public safety stakeholders.

Cooperative Partners:

This project was developed by the National Center for Policing Innovation, formerly known as VCPI, and funded by the U.S. Department of Justice, Office of Community Oriented Policing Services (COPS).
